

VERIFIED CROSS-CHAIN RISK · ENFORCEABLE LIQUIDITY PROTECTION

Protect a lending pool **before** **defaults spread.**

Attestcoin supplies proven facts. Gemini interprets the portfolio pattern.
Creditcoin smart contracts retain final authority.

The same pool. The same loan request. A safer outcome.

BEFORE · NORMAL

10%

protected reserve

90 prUSD lendable

70 prUSD request: **ALLOWED**

AFTER · STRESS

40%

protected reserve

60 prUSD lendable

70 prUSD request: **BLOCKED**

Four small settled payments plus two high-value late payments produced a real, policy-bounded reserve change on Creditcoin CC3.

Cross-chain lending is blind—or forced to trust a private reporter.

01

Facts live elsewhere

A Creditcoin pool cannot independently read whether a borrower paid late on Sepolia.

02

Risk is relational

Two late borrowers in one economic group are more dangerous than two isolated late events.

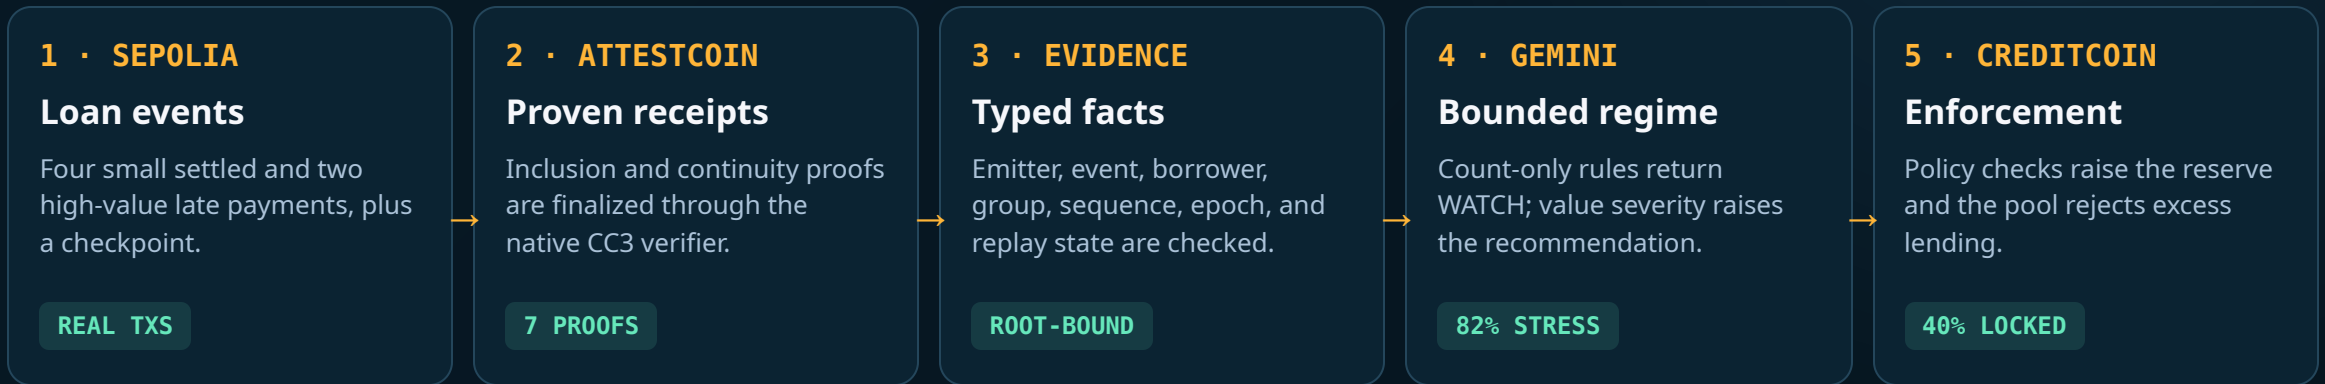

03

AI should not hold the keys

A flexible model can recognize the pattern, but deterministic contracts must control the money.

“Verified facts in. Bounded reasoning. Contract-enforced consequences.”

One auditable path from source receipt to lending capacity.

A proof of a transaction is the beginning—not the end—of trusted financial evidence.

Without Attestcoin

A private API says a borrower was late. The pool must trust the API operator, its infrastructure, and its interpretation of the source chain.

With Attestcoin + ProofReserve

Attestcoin proves the source receipt. ProofReserve verifies its exact business meaning before it can influence a reserve decision.

Allowlisted source emitter

Exact event signature

Ordered checkpoint

Replay rejection

Gemini explains the pattern. It never controls the funds.

AI may

Interpret verified aggregate features, identify correlated deterioration, select one finite regime, and provide reason codes.

AI may not

Move tokens, choose arbitrary percentages, construct calls, rewrite evidence, bypass confidence, or silently lower protection.

CREDITCOIN CONTRACT CHECKS

- ✓ Authorized assessment signer
- ✓ Matching evidence root and epoch
- ✓ Feature, model, and policy versions
- ✓ Minimum 60% model confidence
- ✓ Finite reserve bands: 10 / 20 / 40 / 60%
- ✓ Immediate increases; delayed decreases

The judged result is already live on testnet.

Manage pool

Can this pool fund the loan?

STRESS

Test a request against the reserve enforced by the Creditcoin contract.

100 prUSD managed

40 protected

60 lendable

Loan request

70 prUSD

507095

Check live capacity

BLOCKED BY CONTRACT

The request is 10 prUSD above the pool's current lending limit.

Why the limit changed

Inspect proof

Verified facts from Ethereum changed a real lending limit on Creditcoin.

2 late repayments

Attestcoin proof

Gemini: STRESS

40% enforced

Pool capacity comparison

Before risk signal

70 prUSD request: ALLOWED

10 protected

90 lendable

Current

70 prUSD request: BLOCKED

40 protected

60 lendable

The pool's lending limit decreased from 90 to 60 prUSD after new cross-chain evidence was verified.

AI recommends

Smart contract has final authority

- ✓ Ethereum Sepolia source loan book
- ✓ Seven Attestcoin proofs finalized on CC3
- ✓ Gemini inference mode recorded
- ✓ 40% reserve enforced on Creditcoin
- ✓ 70 prUSD capacity rejection reproduced
- ✓ 49 automated tests + 64 live checks

07

Make verified cross-chain risk protection reusable across Creditcoin.

NOW · PROVEN

One protected pool

Complete source-to-proof-to-AI-to-enforcement flow on Sepolia and CC3.

NEXT · PRODUCTIZE

Self-service pools

Factories, operator onboarding, configurable evidence sources, policies, and monitoring.

THEN · EXPAND

Risk coordination layer

Reusable protection for lending, undercollateralized credit, RWAs, and cross-chain liquidity.

CEIP fit: engineering support and ecosystem introductions can turn a validated CC3 workflow into infrastructure that brings lenders and real financial activity to Creditcoin.
